Subject: Letter of Recommendation for AZ RamJack/AZ Repair Masons

Dewayne,
For your information.....

It is my pleasure to recommend Dewayne Craig and the companies he represents, Arizona Repair Masons & Arizona Ram Jack. Through the Ram Jack Division he designed and installed a micro pile system to replace the aging dead man system for the guy wires for our cooling tower static poles and traffic bollards at our Navajo Generating Station.

At our Desert Basin Generation Station he and his team through the Arizona Repair Masons division designed a floor leveling system to provide a positive drain system to remove the standing water problem we were experiencing.

On both projects they were able to provide a cost effect solution using leading edge technologies.

They were very professional in implementing their designed systems and completing the projects on schedule.

They demonstrated superior safety procedures and provided ergonomically friendly solutions.

I would recommend them to anyone in need of the array of engineered services they provide.
